representations, avatars, of real objects. These techniques allow dynamic real objects, such as the user, tools, and parts, to be visually and physically incorporated into the virtual environment (VE). The system uses image-based object reconstruction and a volume query mechanism to detect collisions and to determine plausible collision responses between virtual objects and the avatars. This allows o ...

Applications: Collision detection and tissue modeling in a VR-simulator for eye 89% surgery

Clemens Wagner, Markus A. Schill, Reinhard Männer

This paper gives a survey of techniques for tissue interaction and discusses their application in the context of the intra-ocular training system EyeSi. As key interaction techniques collision detection and soft tissue modeling are identified. For collision detection in EyeSi, an enhanced image-based approach for collisions between deformable surfaces and rigid objects is presented. By exploiting the computing power of graphics processing units, it achieves higher performance than existing geome ...

6 Papers: managing user interaction: Clothing manipulation

88%

Takeo Igarashi , John F. Hughes

Proceedings of the 15th annual ACM symposium on User interface software and technology October 2002

This paper presents interaction techniques (and the underlying implementations) for putting clothes on a 3D character and manipulating them. The user paints freeform marks on the clothes and corresponding marks on the 3D character; the system then puts the clothes around the body so that corresponding marks match. Internally, the system grows the clothes on the body surface around the marks while maintaining basic cloth constraints via simple relaxation steps. The entire computation takes ...

Untangling cloth

85%

David Baraff , Andrew Witkin , Michael Kass

ACM Transactions on Graphics (TOG) July 2003

Volume 22 Issue 3

Deficient cloth-to-cloth collision response is the most serious shortcoming of most cloth simulation systems. Past approaches to cloth-cloth collision have used history to decide whether nearby cloth regions have interpenetrated. The biggest pitfall of history-based methods is that an error anywhere along the way can give rise to persistent tangles. This is a particularly serious issue for production character animation, because characters' bodies routinely self-intersect, for instance in the be ...

11 An end-to-end approach to host mobility

83%

Alex C. Snoeren , Hari Balakrishnan

Proceedings of the 6th annual international conference on Mobile computing and networking August 2000

We present the design and implementation of an end-to-end architecture for Internet host mobility using dynamic updates to the Domain Name System (DNS) to track host location. Existing TCP connections are retained using secure and efficient connection migration, enabling established connections to seamlessly negotiate a change in endpoint IP addresses without the need for a third party. Our architecture is secure—name updates are effected via the secure DNS update protocol, while TCP ...

12 Location information: Range-free localization schemes for large scale sensor

82%

|4| networks

Tian He , Chengdu Huang , Brian M. Blum , John A. Stankovic , Tarek Abdelzaher Proceedings of the 9th annual international conference on Mobile computing and networking September 2003

Wireless Sensor Networks have been proposed for a multitude of location-dependent applications. For such systems, the cost and limitations of the hardware on sensing nodes prevent the use of range-based localization schemes that depend on absolute point-to-point distance estimates. Because coarse accuracy is sufficient for most sensor network applications, solutions in range-free localization are being pursued as a cost-effective alternative to more expensive range-based approaches. In this pape ...

13 Modeling and animating hands & bodies: Construction and animation of

82%

|4| anatomically based human hand models Irene Albrecht, Jörg Haber, Hans-Peter Seidel

Proceedings of the 2003 ACM SIGGRAPH/Eurographics Symposium on Computer Animation July 2003

The human hand is a masterpiece of mechanical complexity, able to perform fine motor manipulations and powerful work alike. Designing an animatable human hand model that features the abilities of the archetype created by Nature requires a great deal of anatomical detail to be modeled. In this paper, we present a human hand model with underlying anatomical structure. Animation of the hand model is controlled by muscle contraction values. We employ a physically based hybrid muscle model to convert ...

14 Production and playback of human figure motion for visual simulation

82%

John P. Granieri , Jonathan Crabtree , Norman I. Badler

ACM Transactions on Modeling and Computer Simulation (TOMACS) July 1995

Volume 5 Issue 3

We describe a system for off-line production and real-time playback of motion for articulated human figures in 3D virtual environments. The key notion are (1) the logical storage of full-body motion in posture graphs, which provides a simple motion access method for playback, and (2) mapping the motions of high DOF figures to lower DOF figures using slaving to provide human models at several levels of detail, both in geometry and articulation, for later playback. We present our system in th ...

15 Sensation preserving simplification for haptic rendering

82%

Miguel A. Otaduy , Ming C. Lin

ACM Transactions on Graphics (TOG) July 2003

Volume 22 Issue 3

We introduce a novel "sensation preserving" simplification algorithm for faster collision queries between two polyhedral objects in haptic rendering. Given a polyhedral model, we construct a multiresolution hierarchy using "filtered edge collapse", subject to constraints imposed by collision detection. The resulting hierarchy is then used to compute fast contact response for haptic display. The computation model is inspired by human tactual perception of contact information. We have successfull ...

17 The digital Michelangelo project: 3D scanning of large statues

82%

Marc Levoy , Kari Pulli , Brian Curless , Szymon Rusinkiewicz , David Koller , Lucas Pereira , Matt Ginzton , Sean Anderson , James Davis , Jeremy Ginsberg , Jonathan Shade , Duane Fulk Proceedings of the 27th annual conference on Computer graphics and interactive techniques July 2000

We describe a hardware and software system for digitizing the shape and color of large fragile objects under non-laboratory conditions. Our system employs laser triangulation rangefinders, laser time-of-flight rangefinders, digital still cameras, and a suite of software for acquiring, aligning, merging, and viewing scanned data. As a demonstration of this system, we digitized 10 statues by Michelangelo, including the well-known figure of David, two building interiors,

and all 1,163 extant f ...

18 Speculation techniques for improving load related instruction scheduling

82%

Adi Yoaz , Mattan Erez , Ronny Ronen , Stephan Jourdan

ACM SIGARCH Computer Architecture News, Proceedings of the 26th annual international symposium on Computer architecture May 1999

Volume 27 Issue 2

State of the art microprocessors achieve high performance by executing multiple instructions per cycle. In an out-of-order engine, the instruction scheduler is responsible for dispatching instructions to execution units based on dependencies, latencies, and resource availability. Most existing instruction schedulers are doing a less than optimal job of scheduling memory accesses and instructions dependent on them, for the following reasons: • Memory dependencies cannot be resolved prior ...

19 Macro-calibration in sensor/actuator networks

80%

Kamin Whitehouse, David Culler

Mobile Networks and Applications August 2003

Volume 8 Issue 4

We describe an ad-hoc localization system for sensor networks and explain why traditional calibration methods are inadequate for this system. Building upon previous work, we frame calibration as a parameter estimation problem; we parameterize each device and choose the values of those parameters that optimize the overall system performance. This method reduces our average error from 74.6% without calibration to 10.1%. We propose ways to expand this technique to a method of autocalibration for lo ...

20 Cloth & deformable bodies: Estimating cloth simulation parameters from video Kiran S. Bhat , Christopher D. Twigg , Jessica K. Hodgins , Pradeep K. Khosla , Zoran Popović , Steven M. Seitz

80%

Proceedings of the 2003 ACM SIGGRAPH/Eurographics Symposium on Computer **Animation** July 2003

Cloth simulations are notoriously difficult to tune due to the many parameters that must be adjusted to achieve the look of a particular fabric. In this paper, we present an algorithm for estimating the parameters of a cloth simulation from video data of real fabric. A perceptually motivated metric based on matching between folds is used to compare video of real cloth with simulation. This metric compares two video sequences of cloth and returns a number that measures the differences in their fo \dots

(1998) (Correct) (1 citation) containing a full nonlinear electronelectron collision term as well as linear terms representing situations, that the kinetic description closely tracks the macroscopic description even when the mpej.unige.ch/mp_arc/html/html/c/97/97-519.ps.gz

Visual Tracking Using Closed-Worlds - Intille, Bobick (1995) (Correct) (11 citations) tracking difficulties listed in this section, the collision and occlusion problems are particularly Abbreviated version appears in ICCV '95. Visual Tracking Using ClosedWorlds Stephen S. Intille and Aaron www-white.media.mit.edu/vismod/publications/techdir/TR-294.ps.Z

Dimensional Splitting With Front Tracking And Adaptive Grid.. - Lie Haugse (1996) (Correct) some point. Then we have what is called a shock collision. A shock collision defines a new Riemann Dimensional Splitting With Front Tracking And Adaptive Grid Refinement K.A. Lie, V. www.mi.uib.no/~kennethk/articles/art3.ps

Integrating Qualitative and Quantitative Object.. - Dickinson, Metaxas (Correct) Object Representations in the Recovery and Tracking of 3D Shape \Lambda Sven J. Dickinson www.cs.rutgers.edu/pub/technical-reports/lcsr-tr-281.ps.Z

A Parallel Approach to **Tracking** Edge Segments in Dynamic Scenes M. Mirmehdi y www.cs.bris.ac.uk/Tools/Reports/Ps/mirmehdi-ivc93.ps.gz

Mechanisms and Interfaces for Software-Extended Coherent Shared.. - Chaiken (1994) (Correct) (3 citations) ftp.cag.lcs.mit.edu/pub/papers/chaiken-dissert-1-10.ps.Z

Real-Time Lip-Tracking For Lipreading - Stiefelhagen, Meier, Yang (Correct) (4 citations)
Realtime Liptracking For Lipreading Rainer Stiefelhagen, Uwe Meier,
werner.ira.uka.de/papers/speech/EUROSPEECH97/EUROSPEECH97-rainer.ps.gz

Intelligent Computing About Complex Dynamical Systems - Zhao (1994) (Correct) www.cis.ohio-state.edu/insight/papers/mcs.ps

The Data Reduction Expert Assistant - Miller (1992) (Correct) of the data reduction process may require **tracking** tens or hundreds of files through many www.stsci.edu/~miller/draco/draco-aldb.ps

Tracking of Tubular Objects for Scientific Applications - Parvin, Peng, Johnston.. (1994) (Correct) (2 citations)

Tracking of Tubular Objects for Scientific Applications
george.lbl.gov/ITG.hm.pg.docs/VISION/cvpr94.ps

System Architecture and Techniques for Gesture Recognition in.. - Kohler (1997) (Correct) (1 citation) Filter of a vision based system for human motion **tracking** differs from initialization for physical euklid.informatik.uni-dortmund.de/pub/reports/ls7/vsmm97-genf-gesture.ps.gz

Applications of Sequence Geometry to Visual Motion - Clarke (1997) (Correct) (2 citations) and having found them, determine whether a **collision** will occur. The complexity of visual multiple for realtime multiple hypothesis visual feature **tracking**, and provides an implementation for linear www.isr.uc.pt/~johnc/thesis.ps.gz

<u>Learning Planning Operators by Observation and Practice - Wang (1994) (Correct) (12 citations)</u> www.rpal.rockwell.com/~mei/aips94.ps

Formalising Abilities and Opportunities of Agents - van Linder, van der Hoek, Meyer (1998) (Correct) (2 citations)

ftp.cs.uu.nl/pub/RUU/CS/techreps/CS-1998/1998-08.ps.gz
